Myntra E-Commerce Management Analytics Dashboard

Dashboard Goal

Provide an interactive Power BI dashboard that enables e-commerce management to monitor sales performance, customer behavior, product and brand performance, revenue, profitability, order status, payment methods, sales channels, discounts, and geographic performance. The dashboard should transform raw Myntra e-commerce data into meaningful insights for strategic and operational decision-making.

Dashboard Purpose

The purpose of this Power BI dashboard is to provide a centralized analytics platform for:

- E-Commerce Executives
- Sales Teams
- Marketing Teams
- Brand Managers
- Category Managers
- Finance Teams
- Operations Managers
- Business Analysts

Target

The dashboard helps e-commerce management make faster, data-driven decisions regarding:

- Sales Performance
- Revenue Growth
- Product Performance
- Brand Performance
- Customer Analytics
- Profitability
- Discount Strategy
- Order Management
- Payment Performance
- Geographic Sales
- Channel Performance

KPI Cards (Pick Any 6)

KPI Name	Description	DAX Measure
Total Orders	Total unique orders	DISTINCTCOUNT(Myntra_Data[Order_ID])
Total Customers	Total unique customers	DISTINCTCOUNT(Myntra_Data[Customer_ID])
Total Revenue	Total e-commerce revenue	SUM(Myntra_Data[Total_Amount])
Total Profit	Total generated profit	SUM(Myntra_Data[Profit])
Total Quantity	Total products sold	SUM(Myntra_Data[Quantity])
Average Order Value	Average order revenue	DIVIDE([Total Revenue],[Total Orders])
Profit Margin %	Revenue profitability	DIVIDE([Total Profit],[Total Revenue],0)
Average Discount	Average discount percentage	AVERAGE(Myntra_Data[Discount_Percent])

KPI Optional

KPI Name	Description	DAX Measure
Delivered Order Rate	Percentage of delivered orders	DIVIDE([Delivered Orders],[Total Orders])
Cancellation Rate	Percentage of cancelled orders	DIVIDE([Cancelled Orders],[Total Orders])
Return Rate	Percentage of returned orders	DIVIDE([Returned Orders],[Total Orders])
Average Selling Price	Average product selling price	AVERAGE(Myntra_Data[Selling_Price])
Average Quantity per Order	Average units per order	DIVIDE([Total Quantity],[Total Orders])

Clustered Bar Charts

Chart Name	Purpose	Dimensions & Measures
Revenue by Brand	Brand performance	Brand vs Revenue
Revenue by Product	Product performance	Product vs Revenue
Revenue by Category	Category performance	Gender/Category vs Revenue
Profit by Brand	Brand profitability	Brand vs Profit
Orders by City	Geographic order analysis	City vs Order Count
Revenue by Payment Method	Payment analysis	Payment Method vs Revenue
Revenue by Sales Channel	Channel performance	Sales Channel vs Revenue

Line Charts (Pick Any 4)

Chart Name	Purpose	Details
Monthly Revenue Trend	Revenue growth trend	Month vs Revenue
Monthly Order Trend	Order volume trend	Month vs Orders
Monthly Profit Trend	Profitability trend	Month vs Profit
Monthly Quantity Trend	Product sales trend	Month vs Quantity
Average Order Value Trend	Customer spending trend	Month vs AOV

Donut Charts (Pick Any 4)

Chart Name	Purpose	Details
Order Status Distribution	Order performance	Status vs Order Count
Gender Distribution	Customer analysis	Gender vs Customer/Order Count
Payment Method Distribution	Payment analysis	Payment Method vs Orders
Sales Channel Distribution	Channel analysis	Channel vs Orders
Size Distribution	Product size analysis	Size vs Quantity
Color Distribution	Product preference analysis	Color vs Quantity

Tree Map

Chart Name	Purpose	Details
Revenue by State & City	Regional revenue analysis	State → City vs Revenue
Brand & Product Revenue	Product contribution analysis	Brand → Product vs Revenue
Category & Brand Profit	Profitability analysis	Category → Brand vs Profit

Matrix Report

Report Name	Purpose
Brand Performance Matrix	Brand, Product, Orders, Quantity, Revenue, Profit
Product Performance Matrix	Product, Brand, MRP, Selling Price, Discount, Revenue, Profit
Customer Performance Matrix	Customer, City, State, Orders, Quantity, Revenue, Profit
Location Performance Matrix	State, City, Orders, Revenue, Profit
Payment Performance Matrix	Payment Method, Orders, Revenue, Profit

Map Visual

Chart Name	Purpose
Revenue by State	Geographic revenue analysis
Orders by City	Geographic order distribution
Profit by State	Regional profitability
Customer Distribution by City	Customer geographic analysis

Decomposition Tree

Revenue Analysis

Revenue → State → City → Brand → Product

Profit Analysis

Profit → Category → Brand → Product

Order Analysis

Orders → Sales Channel → Payment Method → Order Status

Customer Analysis

Revenue → State → City → Customer

Top N Reports

Report Name	Purpose
Top 10 Brands by Revenue	Highest revenue-generating brands
Top 10 Products by Revenue	Best-performing products
Top 10 Customers by Revenue	Highest-value customers
Top 10 Cities by Revenue	Highest revenue-generating cities
Top 10 States by Revenue	Highest-performing states
Top 10 Products by Profit	Most profitable products
Top 10 Brands by Profit	Most profitable brands
Top 10 Customers by Profit	Highest-profit customers

Slicers (Pick Any 6)

- Order Date
- Gender
- Brand
- Product Name
- City
- State
- Payment Method

- Order Status
- Sales Channel
- Size
- Color
- Customer Name

Expected Outcome

- Monitor e-commerce performance in real time.
- Analyze sales and revenue trends.
- Identify high-performing brands and products.
- Identify high-value customers.
- Analyze city and state-wise sales performance.
- Evaluate product profitability.
- Analyze discount and pricing performance.
- Track payment method and sales channel performance.
- Monitor cancelled and returned orders.
- Understand customer purchasing patterns.
- Identify business growth opportunities.
- Improve operational efficiency through interactive dashboards.
- Enable management to make faster, data-driven decisions.
